

PlantingScience Genetics in inbred lines of *Arabidopsis thaliana*

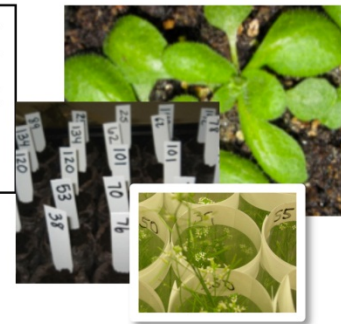

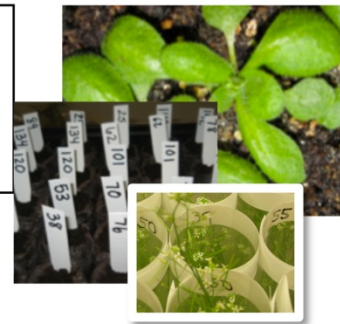

Table of Contents

Teacher's Guide	
Module Summary	1
Module Information and Use: A Word to Teachers	2
Module Design and Learning Goals	4
Alignment of Learning Goals and Activities	5
Alignment with National Science Education Standards	6
Materials	7
Practical Considerations	8
Recording and Sharing	9
Lesson Plans and Activities (Overview)	10
Suggested Activity and Lesson Planner	11
General Life Cycle of <i>Arabidopsis thaliana</i>	12
Suggested Traits to Observe	13
Engage Lessons	14
Lesson Option 1: Are traits determined more by genes or by environment?	14
Lesson Option 2: What is a model organism and why is <i>Arabidopsis thaliana</i> one?	15
Lesson Option 3: When do traits appear in <i>Arabidopsis thaliana</i> ?	16
Lesson Option 4: What are linked genes and how might we look for them?	17
Explore and Explain in Labs	18
Basic – Lab 1: Sowing, cold-treating and germinating seeds	19
Basic – Lab 2: Observing traits – Variation in a population	20
Basic – Lab 3: Developing the research question(s)	21
Basic – Lab 4: Understanding the experimental design	23
Basic – Lab 5: Counting trichomes	24
Basic – Lab 6: Analyzing trichome data	26
Extended – Lab 7: Recording and analyzing flowering time	27
Extended – Lab 8: Bolting plants and the erecta phenotype	28
Extended – Lab 9: Analyzing data to investigate linked traits	29
Extended – Lab 10: Collecting seeds	30
Sense-Making Activities	31
Background Information: Patterns of Inheritance	32
Instructions: Light box construction for growing plants	36
Resources and References	37

PlantingScience Genetics in inbred lines of *Arabidopsis thaliana*

Student Sheets

Traits and Phenotype	1
Variation of Traits	2
Model Organism, Ecotypes and RILs	3
Inheritance and RILs in Arabidopsis	4
Model Organism, Ecotypes, RILs – Study Questions	5
Genetic Linkage, Recombination and RILs	6
Experimental Design	10
Lab 1: Sowing, Cold-treating and Germinating Seeds	12
Lab 2: Observing Traits – Variation in a Population	15
Lab 3: Developing the Research Question	16
Observations, Data and Pooling Data	19
Lab 5: Counting Trichomes	20
Analyzing Data and Looking for Patterns	24
Lab 6: Analyzing Trichome Data	25
Lab 7: Recording Flowering Time	30
Variation in Flowering Time as a Continuous Trait – Background	32
Lab 8: Bolting Plants and the Erecta Phenotype	34
Lab 9: Analyzing Data to Investigate Linked Traits	36
Lab 10: Collecting Seeds	38
