Template Notes

1. Each student needs to make one piece of labeled filter paper. Print this sheet and cut it to make four templates.
2. Date listed should be the date the seeds will be plated, which may be different from the date when the filter paper is prepared.
3. The second line of text should reflect each group's specific treatment type – water or GA.
4. The unknown should be identified on the labeled paper – A or B.
